External examiner

RECOMMENDATIONS

The Project work entitled "Blood Bank Management " submitted by Vaidehi Dangi is satisfactory account of the Bonafide work under my supervision and is recommended towards the end of their 5th semester of MTECH (I.T)- 2024.

Guided By:

Dr. Shaligram Prajapat

ACKNOWLEDGEMENT

I would like to express my gratitude toward staff of IIPS -DAVV as well as the honorable director Dr. B. K. Tripathi for providing us a great opportunity to complete a project on “Blood Bank Management”. My sincere thanks go to Dr. Shaligram Prajapat for his support and guidance for the completion of this project.

ABSTRACT

The purpose of this study was to develop a blood management information system to assist in the management of blood donor records and ease/or control the distribution of blood in various parts of the country basing on the hospital demands. Without quick and timely access to donor records, creating market strategies for blood donation, lobbying and sensitization of blood donors becomes very difficult. The blood management information system offers functionalities to quick access to donor records collected from various parts of the country. It enables monitoring of the results and performance of the blood donation activity such that

relevant and measurable objectives of the organization can be checked. It provides to management timely, confidential and secure medical reports that facilitates planning and decision making and hence improved medical service delivery. The reports generated by the system give answers to most of the challenges management faces as far as blood donor records are concerned.

The proposed of Blood Bank App helps the people who are in need of a blood by giving them all details of blood group availability or regarding the donors with the same blood group. They don't need to go anywhere to search the blood when they need. They just need to use this software then all the result will appear in just a second. Our life is so busy so we don't have time to spend going

here and there, we can use technical way to search the blood by using the Blood Bank software we can find thousands of people who are donating the blood and also get the detail the of that person that in which city he belongs to and what is the Blood group of that person. So, this is the most useful software ever.

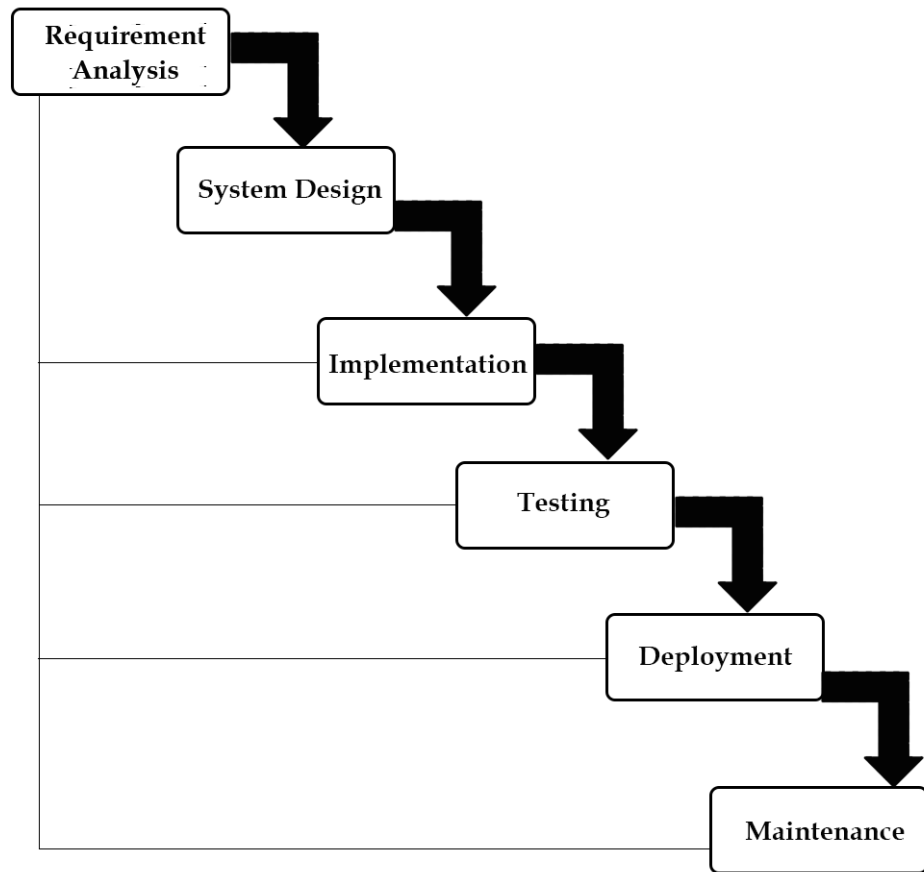

DESIGN & PLANNING

Software Development Life Cycle Model

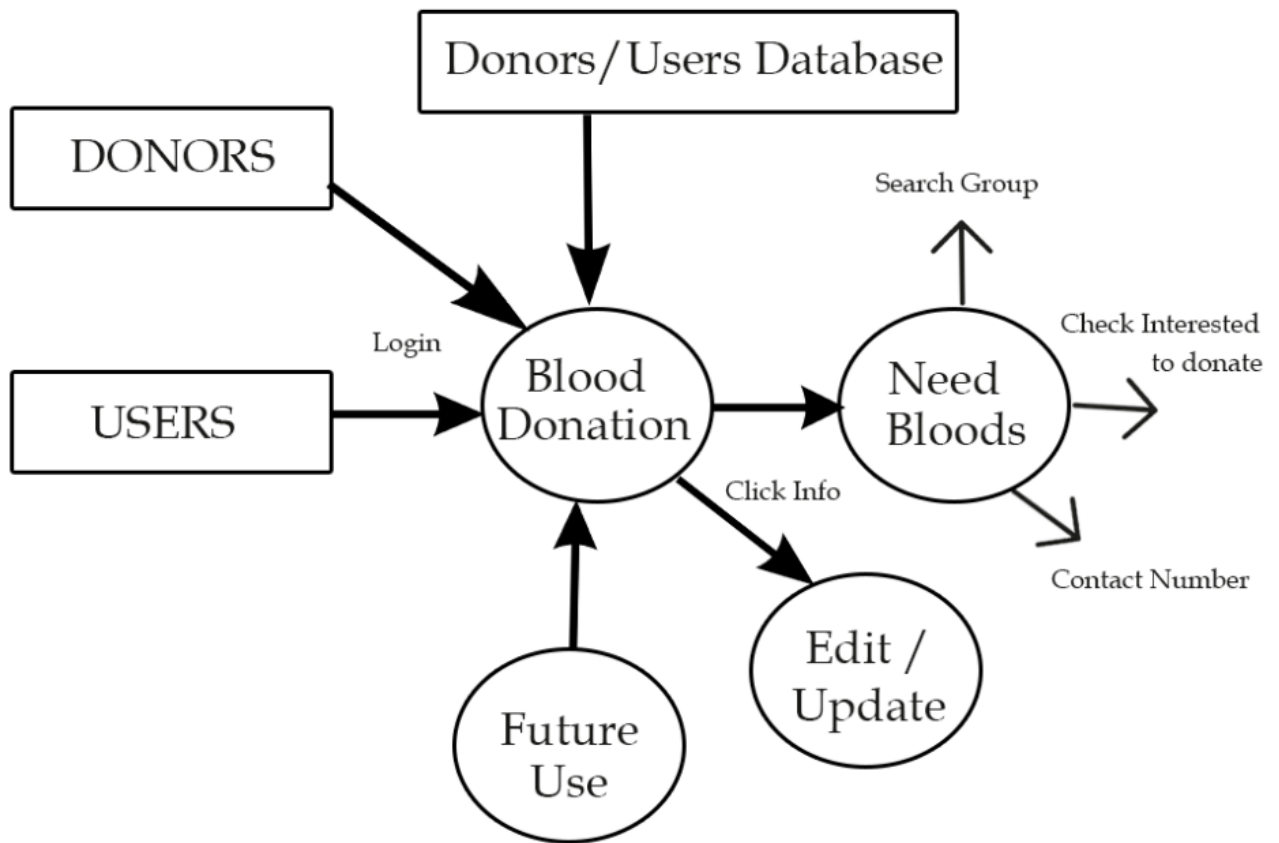

WATERFALL MODEL

The waterfall model was selected as the SDLC model due to the following reasons:

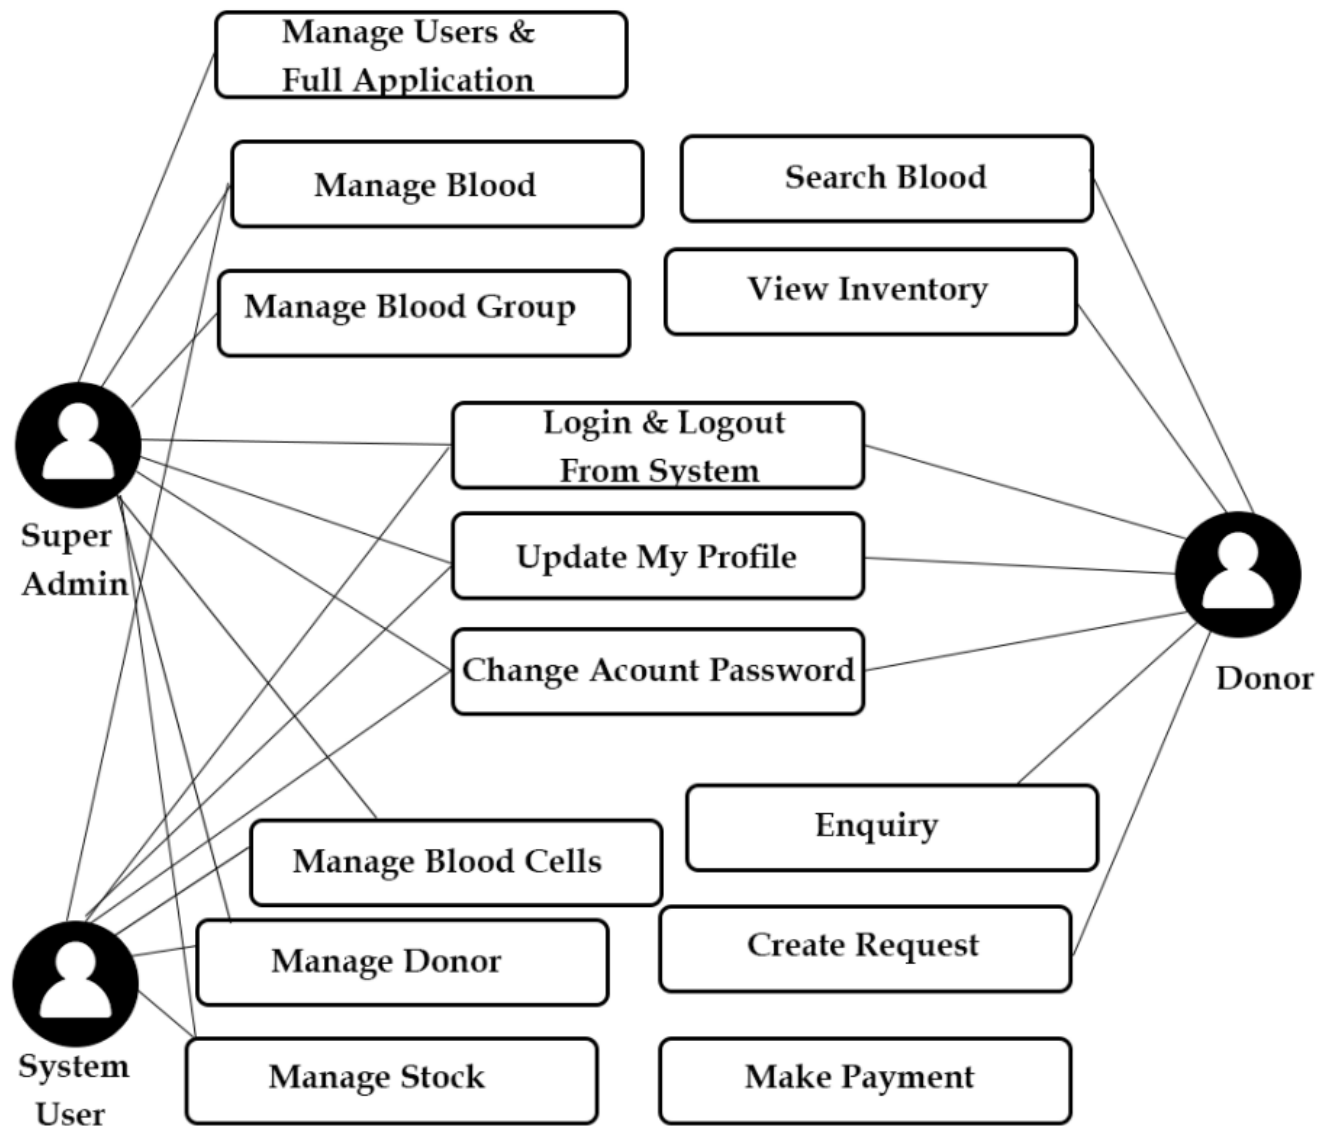

- Requirements were very well documented, clear and fixed.
- Technology was adequately understood.
- Simple and easy to understand and use.
- There were no ambiguous requirements.
- Easy to manage due to the rigidity of the model. Each phase has specific deliverables and a review process.
- Clearly defined stages.
- Well, understood milestones. Easy to arrange tasks.
